Test Case Points (TCP) information

Decisions Points:

Decisions Points Value (average)*:

Flows (test depth level 2):

*)

A simple decision point with 1 singular condition represents a value=1

An average decision point with 2-3 conditions represents a value=2

A complex decision point with > 3 conditions represents a value=3

It is important to keep in mind that the value of the parameter represents the average value of the sum of the value of all decision points. In case there is no information about the complexity (amount of conditions) of a decision point, the value=2 is used for an average decision point (value=3).

Test Case Points (TCP) information

Decisions Points:	8
Decisions Points Value (average)*:	8x3=24
Flows (test depth level 2):	26
<p>*)</p> <p>A simple decision point with 1 singular condition represents a value of 1.</p> <p>An average decision point with 2-3 conditions represents a value of 3.</p> <p>A complex decision point with > 3 conditions represents a value of 5.</p> <p>It is important to keep in mind that the value of the parameter decision points is the sum of the value of all decision points. In case there is no information available about the complexity (amount of conditions) of a decision point you have to choose for an average decision point (value=3).</p>
